

# COVIDSafe Waste Handling

Having your own bin that only you touch will help prevent the spread of germs. Here are some tips to keep your waste safe:

## Do

-  Empty daily at the nearest red waste bin
-  Wash bin regularly with warm soapy water
-  Place your bin on the ground under your desk
-  Place a piece of paper or cardboard over your mini bin to cover the waste

## Don't

-  Let your waste build up and overflow
-  Leave organic material to rot in your bin
-  Use or touch anyone else's bin
